### HPE Labs

RESEARCH ENGINEER

Austin, TX, US (Remote)

01/08/2024 - present

- Job description: Work as a research engineer carrying out the investigation, design, and implementation of libraries and systems for far memory, which is a disaggregated memory pool shared across heterogeneous and decentralized compute nodes over high performance interconnects (e.g., HPE Slingshot, Infiniband, CXL).

RESEARCH INTERN

Austin, TX, US (Remote)

05/24/2021 - 08/13/2021

- Job description: Scale-out AMBROSIA, a general framework to build resilient distributed systems. Implemented sharding supports with functions to filter out RPC requests and log entries irrelevant to the corresponding shard membership.

- Mentor: Jonathan Goldstein

RESEARCH ASSOCIATE INTERN

Palo Alto, CA, US

06/03/2019 - 08/23/2019

- Job description: Designing far-memory data structures optimized for one-sided RDMA operations. Designed and implemented a hybrid index structure combining a prefix trie with hash tables to take both advantages of an easily cacheable trie structure and one-sided RDMA-efficient hash tables.

- Mentors: Kimberly Keeton, Sharad Singhal, and Marcos K. Aguilera

- Job description: Designing a DRAM cache for key-value stores working on FAM (Fabric-Attached Memory). Designed and implemented a hybrid approach that caches both value and shortcut entries. The posters of this work were presented at OSDI'18 and SOCC'18.
- Mentors: Kimberly Keeton, Haris Volos, and Yupu Zhang
